TESHART
UX SOURCE OF TRUTH

A UX/HCI guardrail for the design and Building AI.
Use this document before designing, implementing, refactoring, or extending the product.

Core idea: Turn your memories into a keepsake.

Teshart is a custom physical pencil-art commission service. A customer submits a personal photograph, pays an advance, Teshart manually creates the physical artwork, and the remaining amount is collected on delivery.

1. Product Truth — Never Violate This

The website is not a digital-art marketplace, print-on-demand store, or generic catalogue. The product is a physical, manually created pencil artwork.

Rule	Meaning
No digital product sale	No downloadable or virtual artwork as the product.
No customer-side generation	The customer submits a photo; Teshart creates the artwork.
No mandatory digital approval	Do not invent a virtual-artwork approval stage.
Advance + delivery balance	Customer pays an advance to confirm; remaining amount is collected on delivery.
Real proof only	Use actual artwork and genuine testimonials; never invent social proof.

Primary UX goals

1. Make ordering easy.
2. Build trust before payment.
3. Make the payment split unmistakable.
4. Make the customer confident about what happens after payment.

2. UX Mental Model

The website should feel like a guided commission experience, not a shopping cart.

DISCOVER → UNDERSTAND → TRUST → CONFIGURE → PAY → WAIT WITH CONFIDENCE → RECEIVE

HCI principles

Progressive disclosure: reveal only the decision needed at the current step.
Recognition over recall: prefer visual choices to dropdown-heavy terminology.
Visibility of system status: always show the current order state and next step.
Error recovery: never make users repeat completed work after a failure.
Consistency: reuse components, patterns and language.
Minimal cognitive load: one primary decision/action per screen.

Three uncertainties to solve

Customer question	UX response
Can they really make this?	Real artwork, before/after examples and genuine customer proof.
How do I order?	Progressive, one-decision-at-a-time flow.
What happens after I pay?	Clear payment split, confirmation, updates and tracking.

3. Information Architecture & Core Flow

Marketing: Home → Real Artwork → How It Works → Proof of Work → Testimonials → Trust → FAQ → Create My Keepsake

Commission: Upload Photo → Artwork Type → Size → Frame → Delivery Details → Review → Advance Payment → Confirmation → Tracking

Core customer flow

01	Upload Photo	Choose source image; show guidance and privacy reassurance.
02	Artwork Type	Single / Couple / Family.
03	Size	A5 / A4 / A3 with dimensions and contextual descriptions.
04	Frame	Artwork Only / With Frame; show actual visual.
05	Delivery Details	Only required customer/address information.
06	Review	Show complete configuration and exact payment split.
07	Advance Payment	Pay the advance required to confirm the commission.
08	Confirmation	Order ID, current state and what happens next.
09	Tracking	Customer-friendly production and delivery timeline.

4. Screen-by-Screen UX Specification

Home / Landing

Turn your memories into a keepsake.
Real artwork first; how it works; proof of work; testimonials; trust; FAQ; primary CTA “Create My Keepsake”. Do not put the full order form on the homepage.
UX intent: Build emotion and trust before commitment.

Upload Photo

Upload your photo
Large upload area, selected-image preview, Change photo, quality tips and reassurance. CTA: Continue.
UX intent: One task only: choose the source image.

Artwork Type

What would you like us to create?
Visual cards: Single Portrait, Couple Portrait, Family Portrait; optional custom request contact.
UX intent: Recognition over recall; avoid dropdowns.

Size

Choose your size
A5 / A4 / A3; dimensions and simple context. A4 may be Most Popular if data supports it.
UX intent: Make an abstract size understandable.

Frame

Choose your finish
Artwork Only / With Frame. Show real frame examples.
UX intent: Make what is included unmistakable.

Delivery Details

Where should we deliver your keepsake?
Full name, mobile, optional email, address, city, pincode. Avoid unnecessary fields.
UX intent: Minimise typing and friction.

Order Review

Review your order
Show photo, type, size, frame, delivery details and exact price breakdown. Separate Pay Now from Remaining on Delivery.
UX intent: Critical trust checkpoint.

Payment

Confirm your order
Clearly state advance and remaining delivery amount. CTA: Pay ■X & Place Order.
UX intent: Remove payment ambiguity.

Order Confirmation

Order Confirmed!
Order ID, production begins, status tracker, WhatsApp contact and Track My Order.
UX intent: Payment success + clear next step.

Tracking

Track your order

Simple timeline: Confirmed → In Progress → Completed → Ready to Dispatch → Dispatched → Out for Delivery → Delivered.

UX intent: Visibility of system status.

5. Trust & Payment Rules

Trust should appear at the moment uncertainty occurs, not only in one generic trust section.

Moment	Message / evidence
Before upload	Show real artwork so the customer can see what Teshart actually creates.
During upload	Explain how the submitted photo is used.
Before payment	Show exact total, advance and remaining amount.
After payment	Confirm receipt, Order ID and production status.
During production	Show current order state and what happens next.
Before delivery	Remind the customer that the remaining amount is collected on delivery.

Payment presentation:
Artwork ■XXX
Frame ■XXX
Delivery ■XXX
Total ■XXX

Pay now ■XXX
Remaining on delivery ■XXX

The customer must never calculate the remaining amount. Do not use artificial MRP/discount framing unless it represents a legitimate business price.

6. Order State Machine & Edge Cases

Normal lifecycle

NEW → UNDER_REVIEW → AWAITING_ADVANCE → CONFIRMED → IN_PROGRESS → ARTWORK_COMPLETED → READY_TO_DISPATCH → DISPATCHED → OUT_FOR_DELIVERY → DELIVERED → COMPLETED

Exception states

State	Purpose
PHOTO_CHANGE_REQUIRED	The photo cannot produce acceptable artwork; request a replacement.
PAYMENT_FAILED	Preserve all completed order data; allow retry.
CUSTOMER_UNRESPONSIVE	Artwork is complete but customer is not responding; follow reminder/hold policy.
ON_HOLD	Order cannot currently progress but remains recoverable.
CANCELLED	Order terminated according to business policy.
DELIVERY_FAILED	Delivery attempt failed; move to reattempt/return decision.
RETURNED	Physical order returned to Teshart; define next action.
REFUND_REQUIRED	Use only when the applicable business policy requires it.

Dead-end rule: Every order must always have a next state, a recoverable exception state, or a terminal state. No order should remain indefinitely “pending.”

7. Building AI Guardrails

Before changing an existing screen:

1. Inspect the existing UX and components.
2. Make the smallest change required.
3. Preserve current behaviour unless this UX document explicitly changes it.
4. Reuse existing components; do not create duplicates.
5. Keep pricing, product rules and order states out of purely visual components.
6. Separate data, business logic and presentation.
7. Test the affected flow after the change.

Before adding a feature:

Ask whether it improves **ordering, trust, payment clarity, or order visibility**. Do not allow secondary features to complicate the primary customer journey without a strong business reason.

Error recovery rules

• Payment failure must not erase the order.
• Back navigation must preserve selections.
• Photo problems must explain the issue and provide a recovery action.
• Customer-facing states should use human language, not database/status terminology.
• Internal operational complexity should remain internal.

Non-negotiable UX test

Can a first-time mobile user understand what to do next without being instructed?

8. Design System & Content Guardrails

Visual personality: warm, elegant, minimal, handcrafted, personal, trustworthy and calm.

Avoid: generic marketplace styling, excessive gradients, flashy animations, discount-store language, excessive cards, unnecessary decoration and fake luxury aesthetics.

Reusable components: header, buttons, inputs, upload area, selection cards, artwork cards, progress indicator, price summary, trust messages, testimonials, status timeline, alerts, confirmation states and CTA sections.

Real content: use actual Teshart artwork and genuine testimonial assets. Never invent proof merely to fill space.

Mobile-first: large touch targets, one primary action per screen, short copy, visible progress, clear back behaviour, minimal typing and preserved state.

9. Pre-Release UX Checklist

■ Customer understands what Teshart sells within a few seconds.

■ Real artwork is visible before payment.

■ Create My Keepsake is the clear primary CTA.

■ Order flow is progressive rather than one giant form.

■ Photo upload gives useful guidance and recovery.

■ Artwork type, size and frame choices are visually understandable.

■ Only necessary delivery information is collected.

■ Total, advance and remaining payment are clearly separated.

■ Payment failure does not destroy completed work.

■ Successful payment creates an Order ID and confirmation.

■ Customer can see what happens next.

■ Tracking is simple and customer-facing.

■ Internal edge cases have defined states.

■ No order can remain indefinitely without a next state or terminal state.

■ Real testimonials and artwork are used.

■ Mobile interaction is comfortable.

■ New features do not break existing UX.

FINAL PRINCIPLE

The website should not feel like a store processing a transaction. It should feel like a trusted craft business guiding the customer from a meaningful photograph to a physical keepsake.
